

We ship the software your agency, office, or campus *actually* runs on.

Origa is an independent build studio — automation, full-stack web, and app work, led end to end by one point of contact from first call to production. No hand-offs, no account layers in between.

THE STUDIO

Harsh Sharma
Developer Lead & Point of Contact

Small on purpose. Accountable end to end.

Origa is led by Harsh Sharma, who scopes, builds, and ships alongside a small bench of developers — then stays on as the point of contact after launch. Clients get one line of communication, not a rotating cast of account managers, and a team that has already built for a private agency, a government office, and a closed university network.

- AI & workflow automation
Document generation, form-to-packet pipelines, internal tools
- Full-stack web builds
Frontend, backend, database, deployment — start to finish
- App builds
Product builds for closed or verified user networks
- Tech consultation & dev leadership
Scoping, architecture calls, and ongoing engineering ownership

SELECTED WORK

Three sectors. Three different trust bars.

CASE 01 · INFLUENCER MARKETING AGENCY · NEW DELHI, INDIA

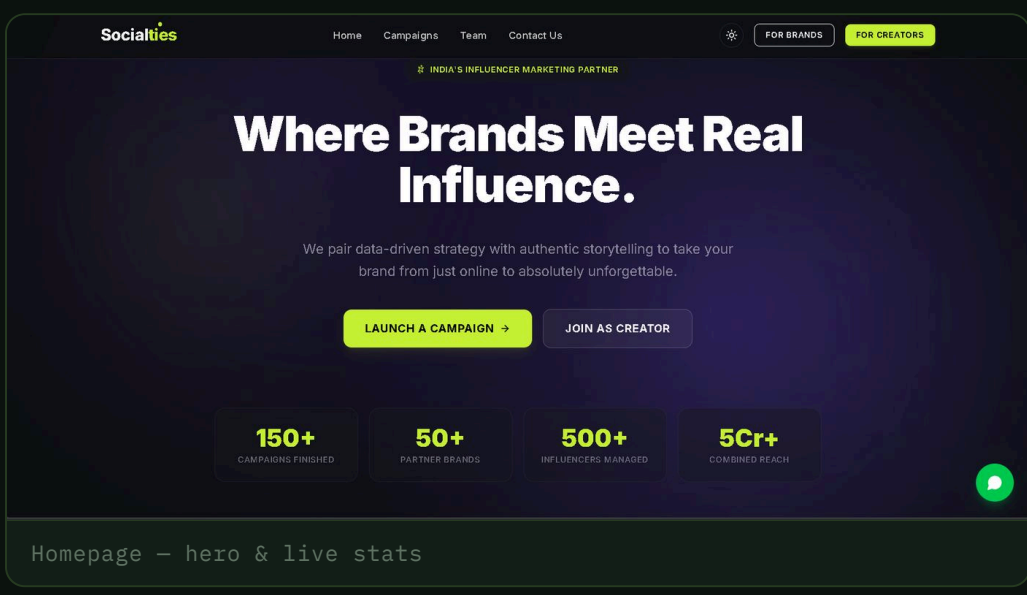

Socialties — the full production site, built and deployed by Origa

Origa designed, built, and deployed Socialties' complete production site: frontend, backend, and the database behind it. The build covers the homepage, campaign and service pages, and the contact flow the agency now runs its outreach through — including the live stats on their homepage (150+ campaigns finished, 50+ partner brands, 500+ influencers managed, 5Cr+ combined reach).

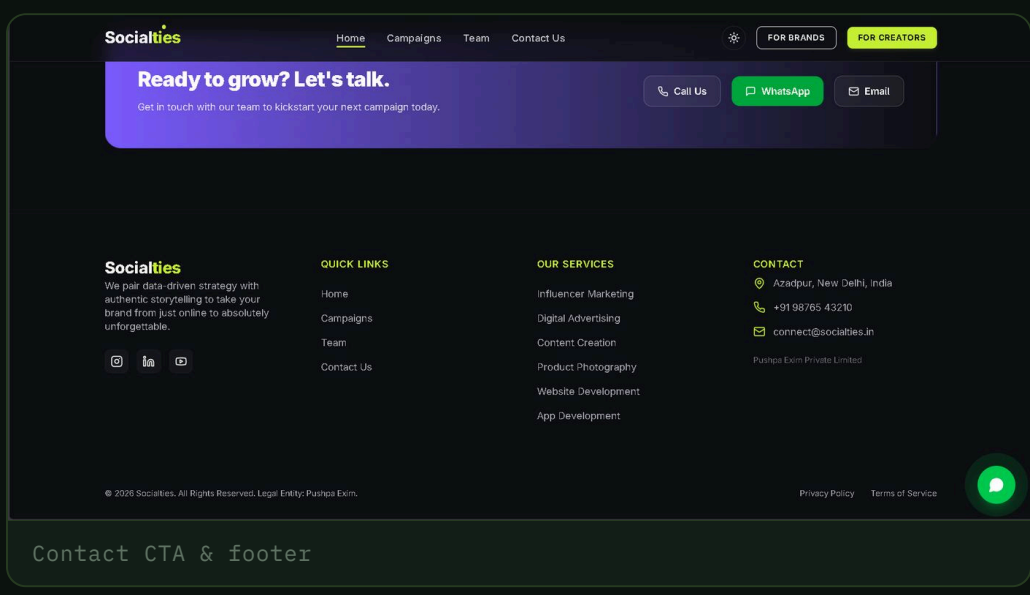

Full-stack Database-integrated Vercel deployment Dark UI system Client: Pushpa Exim Pvt. Ltd.

CASE 02 · GOVERNMENT OFFICIAL · NEW DELHI, INDIA

FIR.ai — one data entry pass, six court forms out

Built for a government traffic investigation officer, FIR.ai automates the most paperwork-heavy part of accident casework: the Detailed Accident Report. An officer enters case, vehicle, driver, owner, insurance, and victim details once — the system reuses them across every required court form (I, V, VI-A, VII, VIII, X) and outputs a formatted, ready-to-file .docx packet as a direct download.

Form automation Document generation (.docx) Government workflow React

CASE 03 · HIGHER EDUCATION · CAMPUS NETWORK

CuziCam — anonymous video chat, closed to one verified campus

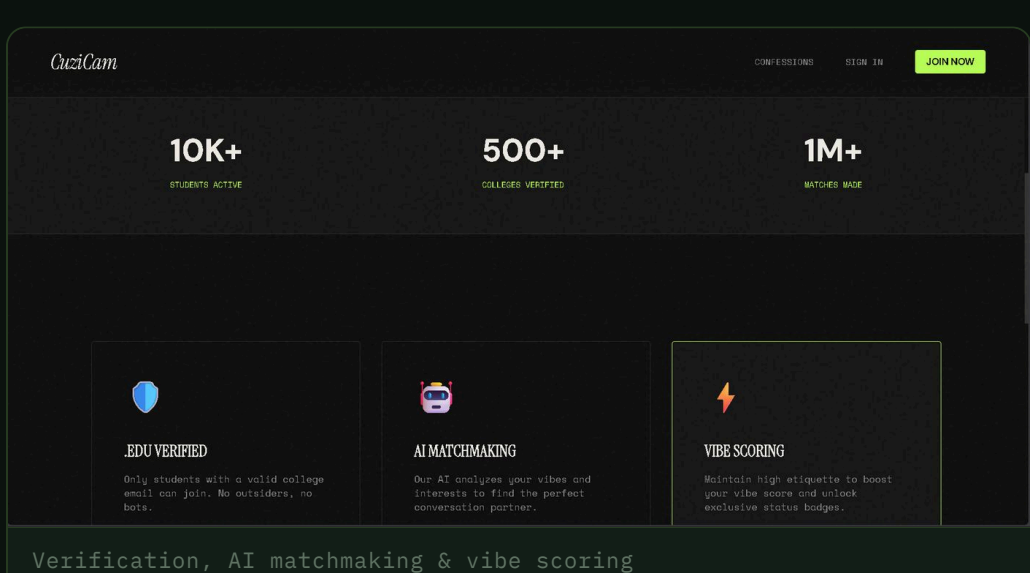

CuziCam is a real-time anonymous video and text chat platform gated to students with a verified .edu email — built end to end by Origa, from the matching logic to the confessions wall. The product pairs students by shared interests, scores conversation etiquette through a "vibe score," and keeps the network closed to verified accounts only, meeting the "no bots, no outsiders" bar universities need before greenlighting a social product on campus.

Verification, AI matchmaking & vibe scoring

WHY CLIENTS STAY

Different trust bars. Same point of contact.

- A registered private agency needed a production site backed by a real database — Origa owned frontend, backend, and deploy.
- A government traffic officer needed a tool that could stand up to court paperwork requirements — Origa built to the exact form structure, no shortcuts.
- A university-facing product needed verified-only access before it could exist on campus — Origa built the gate first, the product second.

GET IN TOUCH

Let's scope your build.

Tell us what you're trying to ship — automation, a full product, or an internal tool — and Harsh will reply directly.
